

SUMMARY

- Highly motivated B.Tech Computer Science undergraduate (2022–2026) specializing in Information Technology with interest in MERN stack, React Native development and machine learning.
- Experience in building web applications with RESTful APIs, authentication, and payment integration.
- Experience working with data analysis and visualization tools such as Pandas, NumPy, Matplotlib, and Seaborn through academic projects.
- Hands-on experience with React.js, React Native, Node.js, Express.js, MongoDB, and SQL through academic and personal projects.
- Proficient in Java, Python, JavaScript, and Data Structures & Algorithms.
- Strong problem-solving ability with experience working both independently and in team-based projects.
- Knowledge of database concepts for SQL & MongoDB.
- Familiar with Git, GitHub, Postman, Expo, and agile software development practices.

TECHNICAL SKILLS

- Programming Languages: C, Java, Python, JavaScript.
- Web Technologies: React Native, HTML5, CSS3, React.js, Node.js, Express.js, Spring Boot.
- AI & Machine Learning Exposure: MobileNetV2, Model Deployment using Flask, Hugging Face (NLP Basics).
- Tools & Environments: VS Code, Jupyter Notebook, Git, GitHub, Postman, Razorpay Integration, Socket.io
- Operating Systems: Linux, Windows
- Core Concepts: Machine Learning Basics, Problem Solving, Data Structures & Algorithms, RESTful APIs, Authentication & Authorization (JWT), Full-Stack Development, Mobile App Development.

MAJOR PROJECTS

Project 1: Food Delivery Management System

Project Type: Full-Stack Web Application (Individual Project)

Duration: 3 Months

Tech Stack:

- Frontend: React.js
- Backend: Spring Boot
- Database: SQL
- Tools: JWT Authentication, Razorpay, Zustand, REST APIs

Description:

A full-stack web application developed to manage online food ordering, cart handling, and secure payment processing.

Responsibilities:

- Designed and implemented RESTful APIs using Spring Boot.
- Developed role-based authentication and authorization using JWT.
- Built responsive user interfaces using React.js.
- Implemented real-time cart management functionality.
- Integrated Razorpay payment gateway for secure online transactions.
- Managed frontend state using Zustand.
- Developed the complete system independently.

Project 2: Potato Leaf Disease Detection System

Project Type: Academic AI Project (Team Project – 6 Members)

Tech Stack:

- Frontend: React.js
- Backend: Flask, Node.Js
- Model: MobileNetV2 (CNN)

Description:

An AI-based web application developed to detect potato leaf diseases using deep learning and provide real-time predictions.

Responsibilities:

- Contributed to the development of a MobileNetV2-based deep learning model for disease classification.
- Integrated the trained model with a Flask backend for API-based predictions.
- Developed frontend components for image upload and result display.
- Assisted in testing and improving model performance using real-world datasets.
- Collaborated with team members during development and deployment.

Project 3: Farm Direct

Project Type: Academic Mobile Application (3rd Year Project)

Tech Stack:

- **Frontend:** React Native, Expo

Description:

Farm Direct is a mobile application developed to bridge the gap between farmers and consumers by reducing the involvement of middlemen. The platform enables farmers to directly list and sell their agricultural products, helping consumers purchase fresh produce at fair prices while ensuring better profits for farmers. The application also includes a bargaining feature that allows buyers and farmers to negotiate product prices.

Responsibilities:

- Developed the mobile application interface using React Native and Expo.
- Implemented user authentication and login functionality.
- Built the product listing and browsing modules for farmers and consumers.
- Developed a bargaining feature to facilitate direct price negotiation between buyers and farmers.
- Participated in testing, debugging, and improving the overall user experience.

INTERNSHIP EXPERIENCE

Techno Exponent (with Euphoria GenX) | June 2025 – August 2025

Project Type: Full-Stack + AI Integrated Application (Individual Project)

Duration: 3 Months

Tech Stack:

- MERN Stack (MongoDB, Express.js, React.js, Node.js)
- Socket.io
- Hugging Face (NLP)

Description:

A web-based retail management system with integrated real-time mobile billing and AI-driven sales forecasting.

Responsibilities:

- Developed backend services using Node.js and Express.js.
- Built interactive frontend interfaces using React.js.

- Implemented real-time billing functionality using Socket.io.
- Integrated NLP-based forecasting features using Hugging Face models.
- Designed an analytics dashboard for business insights.
- Completed the project independently.

CORE COMPETENCIES

- Full-Stack Web Application Development
- RESTful API Design and Integration
- Authentication & Authorization (JWT-Based Security)
- Database Design and Management (SQL, MongoDB)
- Frontend Development using React.js
- Backend Development using Spring Boot and Node.js
- AI Model Integration and Deployment (Flask-Based APIs)
- Payment Gateway Integration (Razorpay)
- Real-Time Application Development (Socket.io)
- Data Structures & Algorithms
- Version Control using Git & GitHub
- Problem Solving and Analytical Thinking
- Individual and Team-Based Project Execution

EDUCATION

Bachelor of Technology (B.Tech) in Information Technology

MCKV Institute of Engineering

2022 – 2026

GPA: 8.66
